

Entelligently: An Advanced, AI-driven Workplace Environment Management System

Transform your buildings into living, breathing ecosystems with entelligently. This dynamic and responsive Workplace Environment Management System (WEMS) seamlessly integrates with your existing Building Management System (BMS), optimizing comfort, reducing energy costs, and enhancing the well-being of your building's inhabitants.

entelligently combines data from your BMS with external weather forecasts and inputs from smart devices to develop a comprehensive understanding of your building's behavior and the comfort thresholds of its users. Harnessing the power of machine learning, entelligently becomes increasingly adept at recognizing patterns and predicting needs, making proactive adjustments for superior comfort and energy efficiency.

Our unique 'Smart Nudges' or 'Snudges', alert users of minor actions they can take to improve their comfort. Imagine a chilly Monday morning at the office after a weekend of shutdown heating systems - entelligently predicts whether natural heat or artificial heating is required based on the weather forecast, and messages staff who might be affected, advising them of optimal actions such as adding an extra layer for a short period.

The entelligently system is flexible, scalable, and user-friendly. Available as a Software-as-a-Service (SaaS) solution or an API for integration into existing software, it's compatible with any BMS with a programmable interface. You maintain complete control over your building data and the smart nudge notifications.

Experience the transformative power of entelligently for a cost-effective £10 per occupied desk per month on each deployed floor.

Join the forefront of building management innovation and give your buildings and their occupants the environment they deserve. To learn more or arrange a trial, email us at contact@kn-i.com or call us today on (+44) 02392 160 640.

Elevate your building experience with entelligently
Intelligent Comfort. Smart Savings. Improved Wellbeing.
